

Global Sustainability Projects

Neutralize your ecological impact and create a more sustainable future

PDI Sustainability Solutions leverages a wide diversity of environmental methodologies across our global project portfolio, developing custom, curated portfolios based on what is most important to your business whether that's by geography, social-impact, or budget.

Type of Projects

There are many different types of carbon offset projects that avoid, reduce, destroy, or capture the emission of greenhouse gases in the short or long term:

- **Carbon:** Neutralize your carbon dioxide equivalent emissions.
- **Plastic:** Invest in and develop projects that remove and recycle plastic waste.
- **Renewable Energy:** Leverage RECs, PPAs, GOs, and other relevant renewable energy projects.
- **Water Restoration:** Use water conservation and reclamation projects in farming communities to reduce the overall amount of water used, as well as waterway cleanups.
- **Local Impact:** Recognize the crucial connection between the planet and people, and the power of small actions to create meaningful impact.

Project Examples

Our portfolio approach allows us to develop, partner, and invest in projects and locations unique to each client:

- **Carbon Projects:** Regenerative Agriculture, Industrial VOC Capture, Afforestation, Reforestation, Direct Carbon Capture
- **Renewable Energy Projects:** Wind Power, Solar Power, Hydro Power
- **Plastic Projects:** Ocean Cleanup, Recycling Initiatives, Reclamation Initiatives
- **Water Projects:** Safe Water, Conservation, Water Quality

Project Requirements

Projects must be verified by independent third parties, ensuring the credits were issued by a reputable source such as Verra, Climate Action Reserve, Gold Standard, CSA Group, American Carbon Registry, and others. Projects must meet these registries' rules and requirements, follow specific third-party approved methodologies, and monitor emission reductions and avoidances.

How It Works

- **Step 1:** Company generates CO₂ emissions.
- **Step 2:** PDI purchases carbon credits.
- **Step 3:** PDI Sustainability Solutions invests in carbon offset projects on behalf of Company.
- **Step 4:** Carbon credits are retired in Company's name.

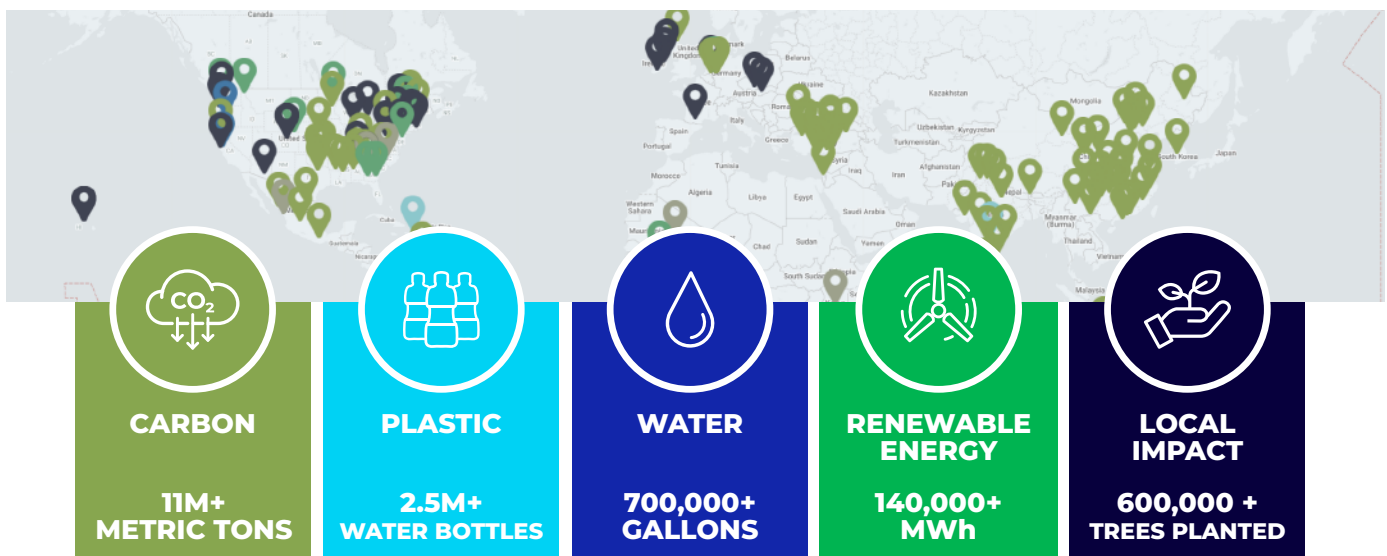

To qualify, each project must meet six principles:

- **Quantifiable:** Accountability for every metric ton of CO₂ equivalent
- **Verifiable:** Proof that the reduction has occurred as a result of the project
- **Auditable:** Ability to review the validation reports
- **Registered:** Publicly registered and retired on a registry
- **Permanent:** Environmental impact must be durable and lasting
- **Additionality:** Project must be dependent on the funding from carbon offsets

Project Certification

All PDI Sustainability Solutions carbon offsets are attested to annually by EY, a big four accounting firm. This means that the accuracy and transparency of our actions are reviewed and verified, from our environmental calculations to the retirement of the carbon credits. Our projects not only offset environmental impact, they improve lives, livelihoods, and landscapes for communities around the world.

Making a Global Impact
