

# PDI In-Truck International

## Dispatch Made Paperless

Real-time, paperless delivery tracking mobile application

Using leading edge technology, the PDI In-Truck International solution delivers real-time functionality to the delivery process providing vehicle tracking and compartment/electronic dipstick monitoring.

PDI In-Truck International integrates to our dispatch solution, PDI WinDMS, allowing for a paperless dispatch and distribution process.

Track and Trace

Mobile Access

Data Exchange

Communication

"The on board solution is handy. It enables us to obtain real-time information and keep our drivers up to date through better communication."

– Ralph Schenderlein, Operations Manager,  
ABS Bonifer Group

## Always a Step Ahead: Integration of Wearables

Watch and In-Truck International-Glasses are innovative features that further simplify the workflow for tank station replenishment and heating oil transportation. Without any clipboards or heavy handheld explosion-proof devices, the driver has all the information required for the loading and unloading process. The data is wirelessly transferred, while the driver enjoys freedom of movement. You can leave the truck, without losing track of any needed data. Not only state-of-the-art today, but designed for the future.

### PDI In-Truck International covers:

- Complete shift, trip, loading, and delivery process on board

### PDI In-Truck International enables:

- Geofence checks
- GPS track and trace
- Wide selection of compatible devices
- Paperless dispatch process

### PDI In-Truck International connects to:

- Dispatch office
- Mobile printers
- Digital tachographs
- Fleet management systems (CAN-Bus)
- Automatic Tank Gauging (ATGs)
- Terminal Automation Systems
