

PDI Instance-to-Instance API

Connect to vital partners for effortless coordination

Fluid communication is critical to optimizing your dispatch operations. You need partners you can count on to accurately fulfill orders, but keeping everyone on the same page can feel like a constant struggle.

Two-way API integration puts you and your carrier partners in position to win business and keep customers happy

PDI Instance-to-Instance API joins your PDI Logistics International environment via streaming service to third-party carriers running WinDMS, keeping you in sync with your partners on order details, status updates, and reconciliations. As orders progress, all parties can rely on shared data for accurate fulfillment and effective coordination.
