PDI Instance-to-Instance API

Connect to vital partners for effortless cooperation

Fluid communication is critical to optimizing your dispatch operations. You need partners you can count on to accurately fulfill orders, but keeping everyone on the same page can feel like a constant struggle.

Two-way API integration puts you and your carrier partners in position to win business and keep customers happy

PDI Instance-to-Instance API joins your PDI Logistics Console environment to third-party carriers running WinDMS via API, keeping you in sync with your partners on order details, status updates, and reconciliations. As orders progress, all parties can rely on shared data for accurate fulfillment and effective coordination.

2-Way API Communication

Direct WinDMS Integration

Data Synchronization

Flexible Fulfillment

Eliminate time-consuming, manual communications and let PDI share what matters with the people who need to know.
