

PDI Lottery

End-to-end lifecycle control

Lottery Transactions is a highly mobile, ERP-integrated lottery solution, built to manage the complete inventory lifecycle with no disruption to store workflows.

Modern scanning devices, supported by a secure Wi-Fi connection mean the back office can fit in your back pocket. It's available at a moment's notice with tools designed for efficiency, enabling staff to capture vital data as a natural part of every lottery transaction, including receiving, activations, counts, and returns.

Complete Lifecycle Management

Scan-Based Data Capture

Push-Button Deployment

Full-Store Mobility

No more manual lottery calculations each morning. Simply scan the tickets, and all calculations and postings complete automatically.

Lottery Solutions

- > Receive books into inventory
- > Use scan-based data capture for faster counting
- > Activate books and track inventory by activation status
- > Track expired game returns
- > Manage lottery vending

Mobile Transaction Management

With PDI Retail Site Management, site rollouts are faster and easier than ever. Leveraging highly automated, code-based deployment processes available on multiple supported devices, you simply scan a code to configure device and application settings for near-instant implementation. A smaller technology footprint reduces IT support needs with effortless deployment, redeployment, and hands-free upgrades. API integration means your handhelds stay current and connected.

Reduce IT Burden and
VPN Dependency

Automate Deployment
and POS Integration
