

PDI 5G as a Service – Telecom Pool 2

PDI 5G as a Service – Telecom Pool 2 is a fully managed service which includes a PDI 5G/LTE cellular adapter, used in conjunction with a Customer provided wireless data plan, to provide primary internet at Customer's retail location. The service standardizes, streamlines, and consolidates the deployment and support for Customer distributed networks.

Service includes:

- Plug-and-play hardware ("Hardware") with available installation support provided for the term of the Customer's Order.
- The service is managed and monitored by the PDI award-winning 24/7 Network Operations Center with decades of experience with primary internet and primary wireless.

Service Requirement

- PDI 5G as a Service – Telecom Pool 2 is intended for business use only.
- PDI 5G as a Service – Telecom Pool 2 requires a Customer provided wireless data plan from a Wireless Service Provider approved by PDI.

Definitions

5G: A fifth-generation technology standard for broadband cellular networks that facilitates communications over areas comprised of geographic sub-areas called cells. Each cell has local antennae, through which all wireless devices in the cell are connected to the internet and telephone network via radio waves, also referred to as base stations or cell sites.

Wireless Service Provider: is a provider of wireless communications services that sells wireless connectivity to a customer.
